Aim

I am very passionate and eager to learn new skills and technologies. I have interest on the fronted-end development and want to build my career as a front end developer. Development of good front-end with UI/UX in mind and providing the best user experience, usable product is my field of Interest. Moreover, I am very optimistic about the development of overall IT field in our country. I plan to do this by promoting coding, creative thinking and technology usage. I have a vision and aim to work effectively in the IT field to make a contribution for the positive change in the society with the proper use and adoption of new technologies.

Projects

- **Booksnepal**

This project is focused on creating the platform for selling and buying the old unused books. We developed this site using React Js.

url: <https://booksnepal.ga/> :

- **Automated Parking**

(worked in front end in this group project)

- **Twitter Sentiment Analysis**

This is a group project which is used to analyzing text data and sorting it into sentiments positive, negative, or neutral.

- **Event Management**

This is a Django project which helps to manage the event where people can create a event, attend a event. It serves the functionality of an event manager.
